2.1. RMQ (static)

Dado un arreglo y una operacion asociativa *idempotente*, `get(i, j)` opera sobre el rango `[i, j]`. Restriccion: $LVL \geq \text{ceil}(\log n)$; Usar `[]` para llenar arreglo y luego `build()`.

```

3     tipo vec[LVL][1<<(LVL+1)];
4     tipo &operator[] (int p){return vec[0][p];}
